    Default Gateway . . . . . : 10.184.0.1

Ethernet adapter Bluetooth Network Connection:

    Media State . . . . . : Media disconnected
    Connection-specific DNS Suffix  . :
```

The IP address of my device:10.184.24.161(IPV4 Address) using IITD Wi-Fi

```
C:\Users\HP\Desktop\SEM 5\C0L334\Assignment\Iperf\iperf-3.1.3-win64>ipconfig

Windows IP Configuration

Ethernet adapter Ethernet 2:

    Connection-specific DNS Suffix  . : 
    Link-local IPv6 Address . . . . . : fe80::fd53:6590:f04b:db88%15
    IPv4 Address. . . . . : 192.168.56.1
    Subnet Mask . . . . . : 255.255.255.0
    Default Gateway . . . . . : 

Wireless LAN adapter Local Area Connection* 1:

    Media State . . . . . : Media disconnected
    Connection-specific DNS Suffix  . : 

Wireless LAN adapter Local Area Connection* 2:

    Media State . . . . . : Media disconnected
    Connection-specific DNS Suffix  . : 

Wireless LAN adapter Wi-Fi:

    Connection-specific DNS Suffix  . : 
    IPv6 Address. . . . . : 2401:4900:47ff:8e9d:e548:7623:ba4e:47da
    Temporary IPv6 Address. . . . . : 2401:4900:47ff:8e0d:7d94:fce0:9fe5:c6af
    Link-local IPv6 Address . . . . . : fe80::e548:7623:ba4e:47da%21
    IPv4 Address. . . . . : 192.168.29.223
    Subnet Mask . . . . . : 255.255.255.0
    Default Gateway . . . . . : fe80::54c0:1bff:fe89:c5f2%21
                                192.168.29.197

Ethernet adapter Bluetooth Network Connection:

    Media State . . . . . : Media disconnected
    Connection-specific DNS Suffix  . : 

C:\Users\HP\Desktop\SEM 5\C0L334\Assignment\Iperf\iperf-3.1.3-win64>
```

On connecting through mobile hotspot the IP address of my device came out to be 198.168.29.223

Thus we can observe that IP address depends on the ISP

Part 2:

```
C:\Users\HP\Desktop\SEM 5\COL334\Assignment\Iperf\iperf-3.1.3-win64>nslookup
Default Server:  dns1.cc.iitd.ac.in
Address:  10.10.2.2

> google.com
Server:  dns1.cc.iitd.ac.in
Address:  10.10.2.2

Non-authoritative answer:
Name:    google.com
Addresses:  2404:6800:4002:81c::200e
           142.250.193.206

> facebook.com
Server:  dns1.cc.iitd.ac.in
Address:  10.10.2.2

Non-authoritative answer:
Name:    facebook.com
Addresses:  2a03:2880:f12f:83:face:b00c:0:25de
           31.13.79.35

>
```

Using default IITD DNS server:

The IP address of google.com- 142.250.193.206

The IP address of facebook.com-157.240.16.35

```
C:\Users\HP\Desktop\SEM 5\COL334\Assignment\Iperf\iperf-3.1.3-win64>nslookup
Default Server:  dns1.cc.iitd.ac.in
Address:  10.10.2.2

> lserver 9.9.9.9
Default Server:  [9.9.9.9]
Address:  9.9.9.9

> google.com
Server:  [9.9.9.9]
Address:  9.9.9.9

Non-authoritative answer:
Name:    google.com
Addresses:  2a00:1450:4006:801::200e
           142.250.200.238

> facebook.com
Server:  [9.9.9.9]
Address:  9.9.9.9

Non-authoritative answer:
Name:    facebook.com
Addresses:  2a03:2880:f128:83:face:b00c:0:25de
           157.240.9.35

> _
```

After this I changed DNS server to quadnet DNS server 9.9.9.9 using lserver command and then

The IP address of google.com- 142.250.200.238

The IP address of facebook.com-157.240.9.35

Thus, there is change in Ip address of IP addresses obtained.

Part 3:

```

We can force traceroute to use IPV4 by using

traceroute -4 www.google.com

and we can use traceroute to 10.*.*.* to traceroute to a private IP and we can use -I flag to force the routers to reply.

Packet Analyzer

Part 1(DNS)

Subtask 1:

DNS Query and response messages are sent over UDP

Subtask 2:

1 DNS query is sent from browser to DNS Server

Subtask 3:

1 Local DNS Server and 4 authoritative servers are involved

Subtask 4:

The dns1.cc.iitd.ernet.in replies with actual IP address

Subtask 5:

Yes, all DNS servers respond

Subtask 6:

Name: www.cse.iitd.ac.in, bahar.cse.iitd.ac.in

Value: 10.208.20.4

Type: CNAME, A

Class: IN(0x0001)

TTL: 3600s(1 hour)

The image shows a Wireshark packet capture of a DNS query and response. The packet list on the left shows a query from a client to dns1.cc.iitd.ernet.in at 176.3.632493. The packet details on the left show the query for www.cse.iitd.ac.in, type A, class IN. The packet bytes on the right show the Ethernet II frame and the Internet Protocol Version 4 header.

Packet List:

No.	Time	Source	Destination	Protocol	Length	TCP Segment Len	Info
31	0.142841	Client	dns1.cc.iitd.ernet.in	DNS	81		Standard query 0xe3a4 A updat
32	0.145996	dns1.cc.iitd.ernet.in	Client	DNS	453		Standard query response 0xe3a

iperf Done.

```

Analysing the data and length of each packet we can get that

Total UDP length = $46 * 2 + 8192 * 163 = 1335388$ bytes

Total number of bits = $8 * 1335388 = 10682460$

Time of transaction = time of last packet - time of first packet = $11.443904 - 1.038893 = 10.405011$

Throughput = Total number of bits / time of transaction = 1026664.94057 bits/s = 1.03 Mbits/s

The bandwidth according to Iperf terminal is 1.07 Mbits/s for UDP transmission

Value from Wireshark = 173 Kbits/s

The difference for Wireshark is because it also calculated the IPV4 protocol data and the headers also included in the packets

Calculated value and iperf3 value are almost same but are different from Wireshark capture file properties

Part 3:

HTTP Task

Subtask 1: No of HTTP2 packets present are 10

No of HTTP/1.1 packets present are 2

Subtask 2: The data comes after 5 packets

Subtask 3:

In HTTP 1.1 header is in plain text format whereas in HTTP 2 header is in compressed and encoded format.

Part 4:

Subtask 1:

No of hops involved =15

Subtask 2:

Total number of packets exchanged in the transmission is 148

Packets from client to remote machine =78

Packets from remote machine to client =70

Sl. no	IP address of remote machine	No of packets sent to client	No of packets received from client
1	172.21.160.1		
2	192.168.29.197	5	5
3	192.168.59.1	5	5
4	192.168.27.57	4	5
5	192.168.27.105	1	5
6	122.185.39.5	5	5
7	182.79.189.122	1	5
8	*	*	*

9	195.154.2.103	5	5
10	62.210.0.135	5	5
11	62.210.175.218	5	5
12	195.154.2.104	5	5
13	51.158.8.27	3	5
14	51.158.143.3	4	5
15	163.172.208.7	10	5

Subtask 3:

The fields which are same are:

- i) Internet Protocol Version: As we have used IPv4 protocol for all packets.
- ii) length of packets: As these, all are ICMP packets, so they have the same length.
- iii) destination IP: As we are the ones to receive the packets.
- iv) Protocol: These are all ICMP packets.
- v) Type of ICMP messages: All are TTL exceeded type messages

The fields which are different are:

- i) Port numbers: port number for source and destination are different
- ii) Packet ID: IP packets must have different ids.
- iii) Time to live: subsequent packet has greater TTL.
- iv) checksum: As the header changes, so checksum also should change.
